Assumptions made on relations

User to Fact (1:M) - one user can create many fact posts but a post can only have one owner
User to Location (M:M) - a location can have many users and users can have many locations
User to Visit Log (1:M) - a user have many visit logs but each log belongs to one user
Location to Fact (1:M) - a location can have many fact posts tagged to it but a fact post can only be tagged to a single location (design decision assumption)
